Our Company Overview

AMPS is a leading provider of Electrical EPC services for your business needs. Headquartered in Suriname, the firm has more than a decade of experience in offering solutions specially tailored to client requirements.

Our strength lies in our ability to deliver total solutions at competitive costs backed by excellent customer service. We have the capacity to manage all elements of solution delivery – from engineering, procurement and construction to monitoring, maintenance and support.

We at AMPS provide a large range of power products and services from the power source

to the end power consumer
(Residential, Commercial and Industrial).

The company's strength lies in its ability to deliver turnkey solutions to clients at competitive costs backed by excellence.

How AMPS adds value

AMPS is the preferred provider of tailored engineering and power management solutions due to a number of key factors.

Solutions & Services

AMPS is the provider of choice for customized power solutions for any business.

Mission

To enhance consumer experience by offering innovative high quality and reasonably priced power solutions.

Vision

To be a leading provider of customized power solutions that deliver genuine value to clients across a diversity of business sectors.

Values

In today's world, the rules of doing business are rapidly changing. AMPS believe that, while adaptability is key, our daily values must remain steady and consistent, regardless of circumstances. We act at all times with integrity, courtesy and discretion. These principles underpin our operating policies and our approach to suppliers and customers.

Our values are the cornerstone of what makes us who we are and the basis for everything we do.

Our Philosophy

Our philosophy is such that we will:

- Provide our services at the highest standards available in the market
- Deliver a level of service that exceeds our clients' expectations
- Develop and embrace new technologies and techniques to the advantage of our clients and our business
- Ensure the company's services conserve the integrity of the environment
- Educate & train the youth interested in this growing field, thereby contributing to the community and their development at-large

Engineering, Procurement & Construction

AMPS Power Solutions offers comprehensive electrical engineering-procurement-construction (EPC) services through strategic alliances with leading engineering, materials / equipment and construction companies.

We manage projects from concept through completion.

Depending on project size, scope, and client preference, we act as main contractor, subcontractor, or joint venture partner in the utility and renewable energy markets. We self-perform most of our engineering, procurement and installation work.

Combining our expertise with that of our proven global partners, creates a team able to provide maximum quality, cost efficient and safe results to meet our client's goals. From the earliest planning stages through project delivery, we commit the necessary resources to achieve cost-effective and efficient results. Our EPC solutions offer our clients the simplicity of dealing with a single point of contact.

This level of single-source responsibility and accountability gives our customers the advantage of avoiding the inefficiencies and expense of working with multiple contractors.

A single point of contact for all job components furthermore leads to more effective project management, which provides the ideal vehicle for continuous improvement and helps ensure that cost and schedule commitments are met.

Maintenance & Support

AMPS Power Solutions has over 15 years experience in the electrical power industry. We have been providing clients with the means to optimize their productive capacity and capabilities through maintenance and support programs of their electrical infrastructure.

We look after our clients' assets as if they were our own: meticulously caring for the useful life of their assets, providing support in maximizing the sustainability of the use of these assets and their profitability, streamlining their performance and availability, and minimizing their consumption and operating costs.

Our proven maintenance programs, operational tools and innovative monitoring guarantee minimal risk for downtime and bad power.

Energy Efficiency Services

Many companies have started, or are ramping up, programs to reduce their energy consumption due to rising costs and/or public pressure to reduce environmental footprints.

Our specialized team is focused on the successful implementation of energy efficient technologies for a range of businesses. Energy efficiency is about making energy as economical as possible for users while being as sustainable as possible for the community.

We provide energy audits to improve the customers energy systems.

The primary goals of an energy audit are to:

- Measure and show the quality and quantity of the current state of the building's energy (systems)
- Develop a comprehensive energy strategy, and design and implement an energy management system, based on innovative technologies, in order to achieve high levels of energy efficiency.
- Prove how these improvements will benefit the Owner on the short- and long run financially and non-financially.

Power Generation

AMPS Power Solutions provides a broad array of power generation and energy delivery solutions. We work in several areas of the power industry including delivering, installing and operating generators and renewable resources such as solar plants.

Our experience with integrated back-up solutions (UPS 'Uninterruptible Power Supplies' and Generator systems) spans areas of support for the commercial and industrial industry.

LED Lighting

AMPS Power Solutions has engineering expertise, online simulation and design tools to provide quality LED solutions and products with market-leading innovation.

Our focus is entirely on reliable, high quality, high efficiency, and cost-effective LED products. We design solution-oriented packages around each client's particular goals, using a combination of commercial and industrial experience, manufacturing partnerships, and logistical capabilities. Different considerations to maximize the clients' return on investment include warranty, up front costs, and volume discounts.
